

# SWITCHING SUPPLIERS IS EASY!

1 Go to [www.energizeCT.com](http://www.energizeCT.com)

2 Scroll down and click on [Supplier Rate Finder](#)

3 Select the **Eversource Residential** or **United Illuminating Residential** and click **Search & Compare Rates**

4 Click **Narrow Your Search** to apply filters:

- If handy, enter your **current monthly usage** to make savings shown more accurate
- Enter the **minimum RECs** (i.e. % of your electrical supply that you want to come from clean energy)

5 Review the offers, select the one the best meets your needs, and click **Enroll Now**. Fill out their form using the account information from your last electric bill. You will need your account #, name key, and bill cycle.

## Notes:

- The first offer is the Eversource or UI Standard Offer and rate. After that the other offers are in order of lowest to highest cost. Each will show what you will save for you monthly average use.
- The switch should take effect on your next full bill cycle. At the end of the next month (not this month) look on your bill under the Total Charges for Electricity on page
- This is the generation charge - it should show your new supplier and the rate. The utility will add a charge for delivery to this. They will send you a copy of the contract. Note – you are buying electrons and they are all the same. But buying electrons produced renewably is better for the planet and saves you money over the standard offer.
- You (and the supplier) can cancel at any time.
